Alinco IT Intronis Backup

Data Protection Made Perfect

A software-only BDR solution designed to provide flexible, robust data protection options to today's businesses. Built around a centralized management portal, the solution enables Alinco IT to protect, recover, and restore your files, folders, email, applications, and servers – physical or virtual – both locally and in the cloud.

From ransomware to accidental deletion, Alinco IT has your data protection needs covered. Our [XXXSoftwareXXX] is highly secure and reliable, and scales to meet your business' unique needs.

Ease of Use

Quick Start
Set up is fast. And if you have a lot of data to Backup Initially, we can provide seeding services without tying up available bandwidth.

Automatic Backups
We can schedule your backups to happen whenever you want, ensuring your RTO (recovery time objective) goals are always achieved.

Manage Local and Offsite Backups
Our flexible solution allows for any of your data to be stored online and/or saved to local storage – including your physical machines *and* your virtual machines – eliminating the need for multiple backup solutions.

Business Grade

Multiple Revisions
Store as many versions of a file as you need, so there's no fear of accidental deletion or overwriting a file.

Reporting Notifications
We can send you notifications that your backups have completed successfully, including detailed statistics, or we can setup a customer portal, so you can see the technology in action.

Multiple Device Support
Our solution lets you back up a single computer or server, multiple computers, laptops or even multiple offices.

Alinco Intronis Backup Delivers

Streamlined Restores

Bare Metal Restore (BMR) helps streamline physical and virtual machine recoveries, eliminate configuration errors, and simplify physical-to-physical (P2) and physical-to-virtual (P2V) recoveries. We offer three types
• of restores: BMR to like hardware, BMR to dissimilar hardware, and point-in-time restore.

Rapid Recovery

Backup and recovery options for Hyper-V allow us to address specific restore requirements, including import to Hyper-V, object-level restore, and fast RTO.

Downtime Elimination

QuickSpin, our local disaster recovery tool for VMware, helps us to eliminate extended downtime and restore a business's VMware environments quickly. We can also manage VMware backup and QuickSpin alongside other backups, which provide real-time assessments for easy review   and resolution.

Application-Aware Protection

SQL-native and Exchange-native data protection solutions offer automated, nondisruptive backups of SQL server and Exchange server instances; high-quality, application-aware protection; and simple configuration of full or incremental backups.

Security

HIPAA- and FINRA- compliant encryption

Files are secured using 256-bit AES encryption and a private encryption key. SSL technology is used in data transmission. Your data is protected both onsite and over the Internet, ensuring industry compliance.

Off-site Storage

Data is stored in two, SSAE 16 type II compliant datacenters with redundant storage and biometric security. We also have access to a Canadian data center if needed.

ALINCO Additional Backup Benefits

- Alinco reviews the files and directories. Once complete, we will send to client to sign off confirming the finalized list of backups to be completed. Meetings are available to clients if more detail is needed.
- Alongside client, Alinco will assist in monitoring the backups. If we notice an error on the same file or directory three times in a row, Alinco will reach out to client on how to amend.
- An annual disaster recovery test will also be provided to clients. The report will inform them of how long the backup took, amount of data recovered, and if any errors occurred. Client will need to sign off   on report.
- If errors occurred, Alinco would converse with client on a remedy plan.
